

MARK

BEAN

Developer

PROFILE

I have had an issue with my health and can no longer drive long distances or do field work in my current profession for the foreseeable future and thus am looking for a change in career.

Before now, programming was "fun" and something to pass the time. I have completed an immense amount of training from Udemmy on everything from Python and SQL database classes to full stack web development over the last 5 years. I would put my understanding of object oriented programming at an "intermediate" level, but have never actually had a developer career.

I am well versed in multiple programming languages, have some basic experience debugging code, am great at all things Microsoft, and have lived on a computer since I was 11 years old with my first Windows 95 machine!

My most recent course on Udemmy was a React course and I fell even more in love with development using that framework!
